

Refactoring and modernizing at your pace

Operators: simplifying Kafka (and other deployments)

Ludovic Aelbrecht
Open Transformation Lead

Romuald Vandepoel
Open Transformation Lead

*The only software worth anything to an organization is **in production**, the rest is just garbage piling up in a corner.*

A PROBLEM

DEVELOPERS

I.T. OPERATIONS

A SOLUTION

Your development & deployment platform needs more than just containers

Scheduling

Decide where to deploy containers

Security

Control who can do what

Lifecycle and health

Keep containers running despite failures

Scaling

Scale containers up and down

Discovery

Find other containers on the network

Persistence

Survive data beyond container lifecycle

Monitoring

Visibility into running containers

Aggregation

Compose apps from multiple containers

Kubernetes is an open-source system for automating deployment, operations, and scaling of containerized applications across multiple hosts

kubernetes

KUBERNETES IS NOT THE END GAME

It's a building block to build app platforms

Kelsey Hightower 

@kelseyhightower

Kubernetes is a platform for building platforms. It's a better place to start; not the endgame.

CODENVY

OpenShift is trusted enterprise Kubernetes

- Hundreds of defect and performance fixes
- 200+ validated integrations
- Certified container ecosystem
- 9-year enterprise life-cycle management
- Red Hat is a leading Kubernetes contributor since day 1

“[Red Hat] OpenShift is the **most widely deployed** multicloud container platform and boasts **powerful development and unified operations experiences** across many public and on-premises platforms. Red Hat **pioneered the “operator” model** for infrastructure and application management and provides a rich partner ecosystem and popular marketplace.”

Operator Framework

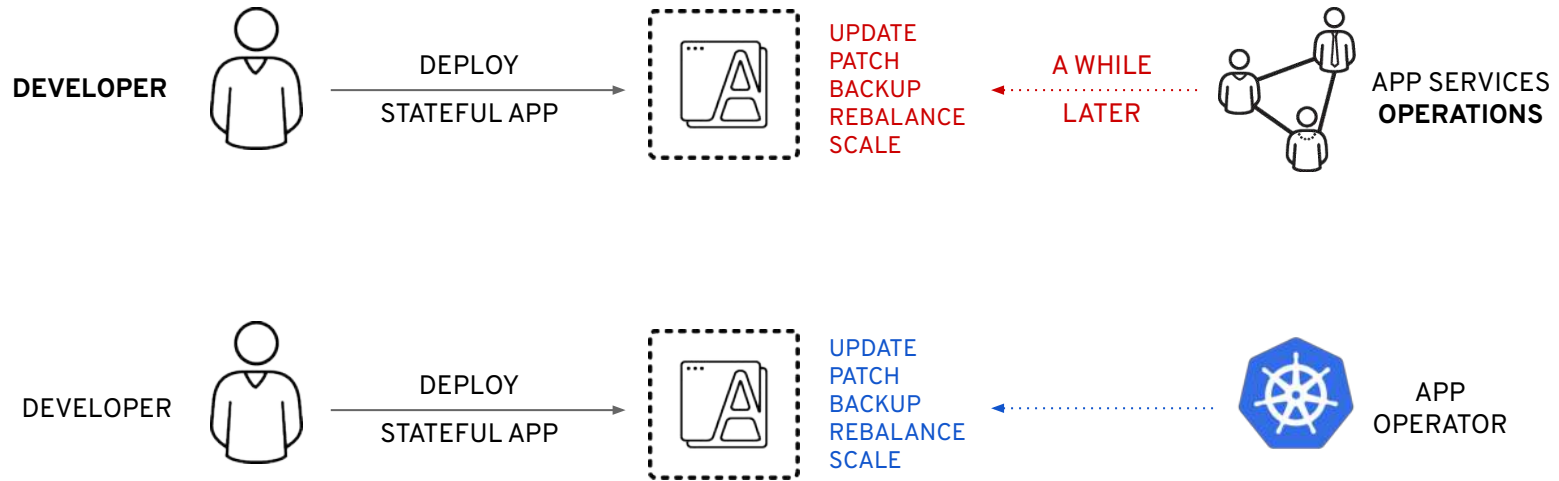

CNCF Incubating Project

Operators:

- codify operational knowledge & workflows
- to automate lifecycle mgmt
- of containerized applications

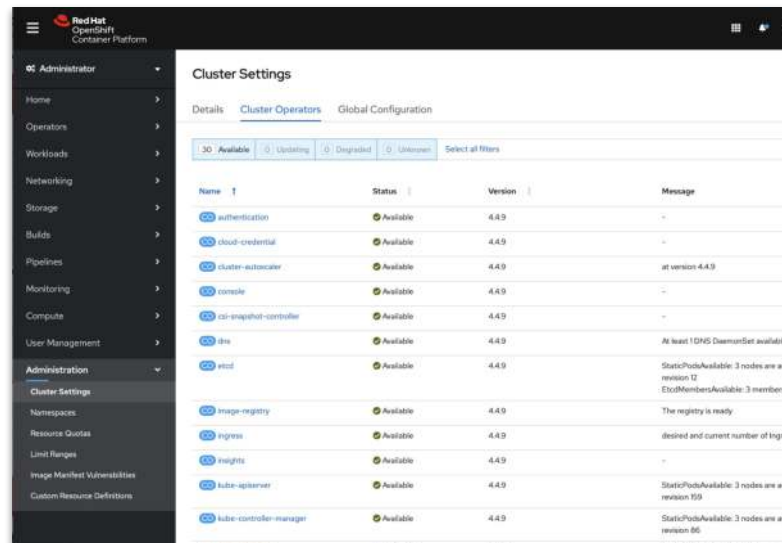

OPERATORS - USE CASE

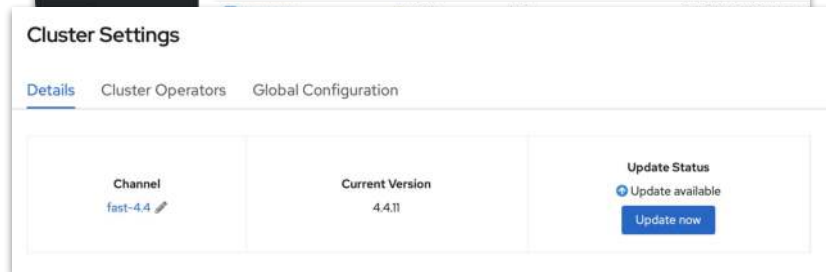

Each OpenShift release is a collection of Operators

- 100% automated, in-place upgrade process
- 30 Operators run every major part of the platform:
 - Console, Monitoring, Authentication, Machine management, Kubernetes Control Plane, etcd, DNS, and more.
- Operators constantly strive to meet the desired state, merging admin config and Red Hat recommendations
- CI testing is constantly running install, upgrade and stress tests against groups of Operators

The screenshot shows the 'Cluster Settings' page in the OpenShift console, specifically the 'Cluster Operators' tab. It displays a table of operators with columns for Name, Status, Version, and Message. The operators listed include authentication, cloud-credential, cluster-autoscaler, console, csi-ephemeral-controller, dns, etcd, image-registry, ingress, insights, kube-apiserver, and kube-controller-manager. Most are in an 'Available' state.

Name	Status	Version	Message
authentication	Available	4.4.9	-
cloud-credential	Available	4.4.9	-
cluster-autoscaler	Available	4.4.9	at version 4.4.9
console	Available	4.4.9	-
csi-ephemeral-controller	Available	4.4.9	-
dns	Available	4.4.9	At least 1 DNS DaemonSet available
etcd	Available	4.4.9	StaticPods/Available: 3 nodes are at revision 12 Etc/Members/Available: 3 members
image-registry	Available	4.4.9	The registry is ready
ingress	Available	4.4.9	desired and current number of logs
insights	Available	4.4.9	-
kube-apiserver	Available	4.4.9	StaticPods/Available: 3 nodes are at revision 99
kube-controller-manager	Available	4.4.9	StaticPods/Available: 3 nodes are at revision 96

The screenshot shows the 'Cluster Settings' page in the OpenShift console, specifically the 'Details' tab. It displays the current channel and version, along with an update status button.

Channel	Current Version	Update Status
fast-4.4	4.4.11	Update available Update now

Day 2 Operations Made Easy

Guide users to recommended update paths and available channels.

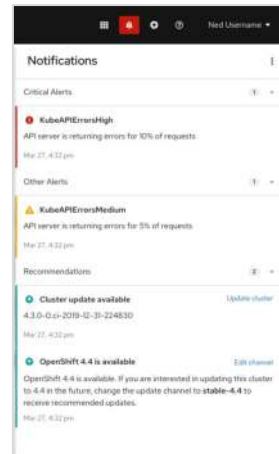

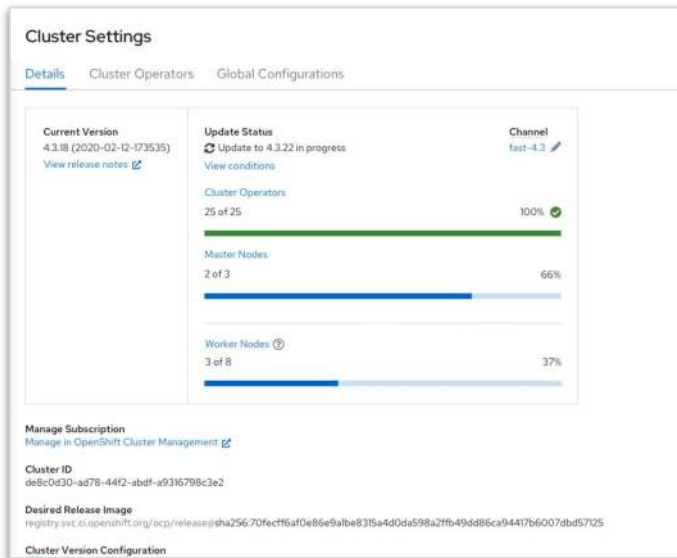

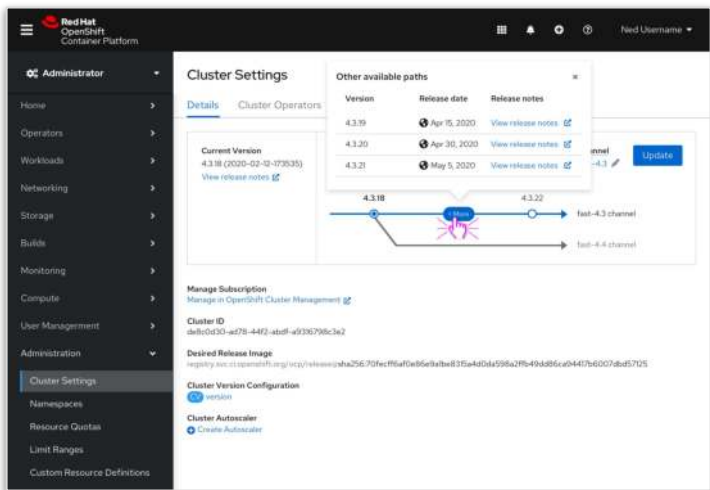

- Make it easier to find information on channels and versions
- Provide recommended update paths

Provide transparency into the update process with an in progress checklist

- Inform on Operator and Node Progress
- Surface conditions

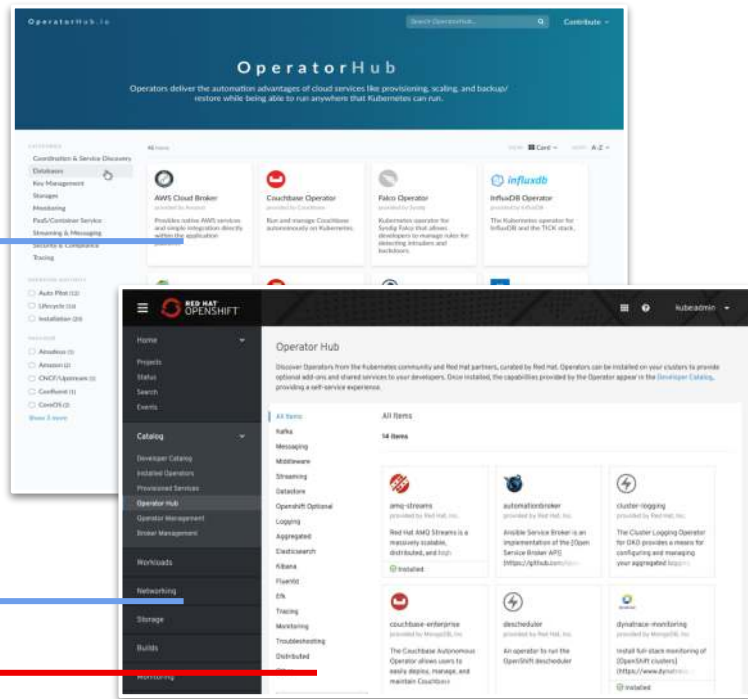

Recommendation Alerts

- Three new recommendation alerts were added to inform users when:
 - a new patch becomes available
 - a new minor release becomes available
 - new channels become

OperatorHub and certified Operators

- OperatorHub.io launched by Red Hat, AWS, Microsoft and Google
- OpenShift Operator Certification
- OperatorHub integrated into OpenShift

COMMUNITY OPERATORS

OPENSIFT CERTIFIED OPERATORS

Red Hat Certified Operators

Red Hat Integration

Data Integration

- ▶ Change Data Capture

API Management

- ▶ API Manager
- ▶ API Gateway
- ▶ Istio Service Mesh Adapter

Tooling & Metadata

- ▶ Service Registry
- ▶ API Designer
- ▶ Integration Operator

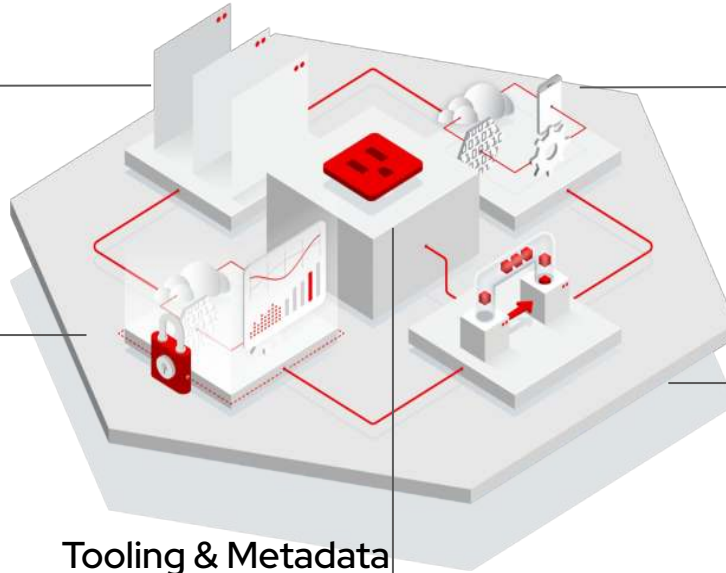

Enterprise Integration

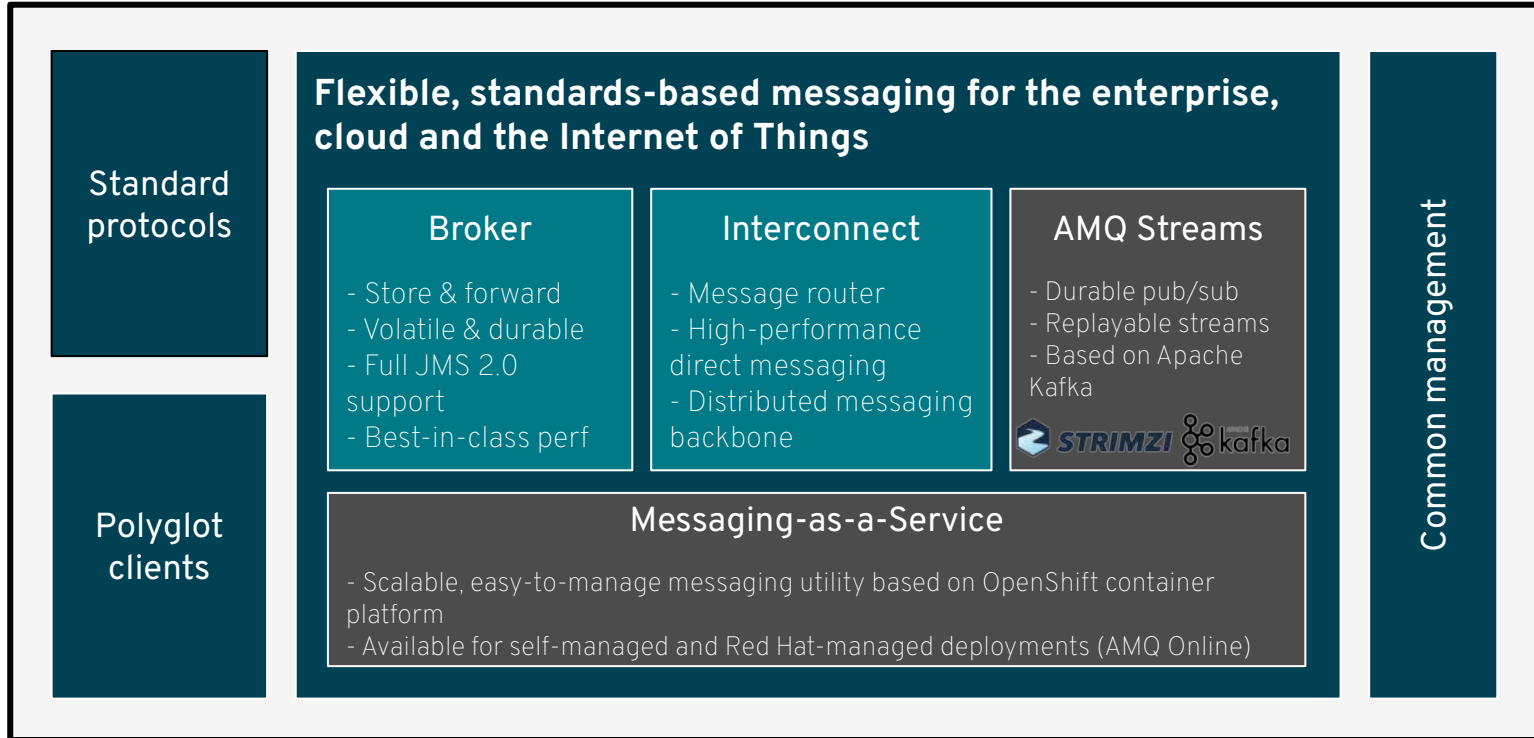

- ▶ Comprehensive connectors
- ▶ Microservices orchestration
- ▶ Data Transformation
- ▶ Low-code iPaaS
- ▶ Kubernetes connectivity with Camel K

Events & Messaging

- ▶ JMS Message Broker
- ▶ Wide Area Routing
- ▶ Data Streaming with Apache Kafka

Red Hat AMQ

What is Apache Kafka?

- ▶ Developed at LinkedIn back in 2010, open sourced in 2011
- ▶ Publish-subscribe messaging system
- ▶ Receives data from disparate source systems; makes the data available to target systems in real time
- ▶ Event streaming platform
- ▶ Designed to be fast, scalable, durable and available
- ▶ High throughput / low latency
- ▶ Ability to handle huge number of consumers

Red Hat AMQ Streams - Apache Kafka

- Red Hat AMQ streams provides:
 - **Container images** for Apache Kafka, Connect, Zookeeper and MirrorMaker
 - **Kubernetes Operators** for managing/configuring Apache Kafka clusters, topics and users
 - Kafka Consumer, Producer and Admin clients, Kafka Streams
- Kafka Operator: **Strimzi**
 - **100% Open source** project
 - Part of the **Cloud Native Computing Foundation** (CNCF)

AMQ Streams (Kafka) on OpenShift

Overview | YAML | Subscription | Events | All Instances | Kafka | Kafka Connect | Kafka Connect S2I | Kafka MirrorMaker | Kafka Bridge

Provided APIs

API	Description	Provider
Kafka	Represents a Kafka cluster	Red Hat
Kafka Connect	Represents a Kafka Connect cluster	Red Hat
Kafka Connect S2I	Represents a Kafka Connect cluster with Source 2 Image support	Red Hat
Kafka MirrorMaker	Represents a Kafka MirrorMaker cluster	Red Hat
Kafka Bridge	Represents a Kafka Bridge cluster	Red Hat
Kafka Topic	Represents a topic inside a Kafka cluster	Red Hat
